

INNOVATIVE INKJET GLASS PRIMER.

YOUR ADVANTAGES

- Can be applied via inkjet
- Saves time and energy
- Clean solution, selective priming
- Visually neutral
- Low consumption
- High dishwasher resistance
- Clean technology

”

APPLY PRIMER ONLY IN
AREAS WHERE YOU NEED IT

Ultra Jet DLE-PG is applied over-spray free only where you need it and is visually neutral. This innovative product allows a higher degree of automation compared to wipe on primers and eliminates the need of pyrosil flame treatment while delivering comparable dishwasher performance. This saves you process costs and energy, as curing requires only UV LED lamps.

Ultra Jet DLE-PG

This digital printable primer is the innovation for glass pre-treatment. Ultra Jet DLE-PG is developed to replace the traditional Pyrsosil pre-treatment without compromising it's performance in terms of adhesion and dishwasher resistance while eliminating the cost and handling issues of an open flame.

Ultra Jet DLE-PG is jettable with the majority of digital printheads and cures with low energy UV LED lamps. Drops are applied when and where needed, eliminating ink waste or over treatment.
